

BioPharma & Chemical Materials Storage

Simply SASSi!

Integrated Storage/Analysis/Sampling/Shipping

NAT is committed to help pharma, biotech, virtual pharma, boutique chemical, reagent and raw material suppliers in relieving the burden associated with maintaining and managing an inventory of non-GMP APIs and solid chemical materials. We custom tailor our services to provide a viable alternative and a list of options complementary to the offerings from the large storage facilities.

In this global economy it is common for chemicals to be sourced from all over the world. Often times these chemicals lack COAs and stability data. NAT picks up where most vendors leave off by providing a full analysis and stability information. Of course we also take care of the shipping logistics.

CONTROLLED STORAGE

- Ambient T (15-30°C)
- Low T (4°C)
- Refrigeration (-20°C, -80°C)
- Data loggers
- 24/7 surveillance
- Back-up generator

MATERIAL SAMPLING & SHIPPING

- Sampling, labeling
- Packing, repacking
- Package design
- MSDS generation
- Shipping, logistics

MATERIAL ANALYSIS

- FT-IR, UV, Moisture (KF)
- Metal analysis (AA)
- Thermal analysis (DSC, TGA)
- HPLC, LC-MS, GC-MS
- Particle size, microscopy
- Full COAs, ICH stability

Testimonials:

“We procured several chemical intermediates from China and India that had to wait before going to our API manufacturing partners and needed analytical verification. NAT handled all our storage and shipping needs and helped generating the COAs. We received a quality service and saved significant amount of time and money.”

John M., Director of Chemistry, Cambridge-based pharma company

“Our company frequently needs to arrange sampling and shipment of the APIs and intermediates to many of our service providers and collaborators. They do it all – storing, receiving, dispensing, relabeling, packaging, and shipping. Something we could not find out anywhere with other operators.”

Peter W., Vice-President, Massachusetts-based virtual pharma company
